# LockOut/TagOut Safety Toolbox

The purpose of the Lock-Out kit is to create a safe working environment for our Technology Education Labs that have power equipment being used. The kit provides a teacher or the person responsible for the lab with security systems that will lockout a piece of equipment from being used if it is broken and need of repair or is unsafe to operate.

The LockOut/TagOut kit should be in a location that is visible and readily available when needed. Ideally near the control panel of the dust collector if the lab is equipped with one.

# Kit Contents
