Mathematics 6 - 9 Progression Chart

In September 2020, teachers will be working hard to create a space that is safe and welcoming for all learners no matter the location of their “classroom”. The first weeks will still be a time to establish a sense of community, engage learners in rich interactive experiences to promote critical thinking and create opportunities for collaboration and discussion. This is an opportune time to develop a culture and a climate for mathematics learning, conducive to collaboration, risk taking and inquiry.

The **Foundational Outcomes** identified in this document represent outcomes determined to be relevant for future learning in mathematics. Decisions about foundational outcomes were made in consultation with teachers, provincial mathematics team, Board and Regional Centre staff. The foundational outcomes are meant to guide teachers in making decisions about creating learning experiences that will prepare and engage their learners in a responsive way. However, a teacher’s professional judgment remains the most important guide to effectively responding to the needs of their learners.

Colour coding has been used to identify outcomes and indicators as foundational (**green**), optional (**orange**) or non-foundational (**red**) for the 2020-2021 school year.

NUMBER PROGRESSION: WHOLE NUMBERS				
TOPIC	MATHEMATICS 6	MATHEMATICS 7	MATHEMATICS 8	MATHEMATICS 9
SAYING NUMBER SEQUENCES, MEANINGFUL COUNTING, AND SKIP COUNTING	N01 Students will be expected to demonstrate an understanding of place value for numbers greater than one million and less than one-thousandth.	N07 Students will be expected to compare, order, and position positive fractions, positive decimals (to thousandths), and whole numbers by using benchmarks, place value, and equivalent fractions and/or decimals.		
REPRESENTING AND PARTITIONING WHOLE NUMBERS	N01 Students will be expected to demonstrate an understanding of place value for numbers greater than one million and less than one-thousandth.	N07 Students will be expected to compare, order, and position positive fractions, positive decimals (to thousandths), and whole numbers by using benchmarks, place value, and equivalent fractions and/or decimals.	N01 Students will be expected to demonstrate an understanding of perfect squares and square roots, concretely, pictorially and symbolically (limited to whole numbers).	
COMPARING AND ORDERING WHOLE NUMBERS	N01 Students will be expected to demonstrate an understanding of place value for numbers greater than one million and less than one-thousandth.	N07 Students will be expected to compare, order, and position positive fractions, positive decimals (to thousandths), and whole numbers by using benchmarks, place value, and equivalent fractions and/or decimals.		

PLACE VALUE – WHOLE NUMBERS	N01 Students will be expected to demonstrate an understanding of place value for numbers greater than one million and less than one-thousandth.	N07 Students will be expected to compare, order, and position positive fractions, positive decimals (to thousandths), and whole numbers by using benchmarks, place value, and equivalent fractions and/or decimals.

3-D OBJECTS	<p>M03 Students will be expected to develop and apply a formula for determining the</p> <ul style="list-style-type: none"> perimeter of polygons area of rectangles volume of right rectangular prisms 		<p>M02 Students will be expected to draw and construct nets for 3-D objects.</p> <p>G01 Students will be expected to draw and interpret top, front, and side views of 3-D objects composed of right rectangular prisms.</p>	<p>G01 Students will be expected to determine the surface area of composite 3-D objects to solve problems.</p>
2-D SHAPES	<p>M03 Students will be expected to develop and apply a formula for determining the</p> <ul style="list-style-type: none"> perimeter of polygons area of rectangles volume of right rectangular prisms <p>G01 Students will be expected to construct and compare triangles, including scalene, isosceles, equilateral, right, obtuse, or acute in different orientations.</p> <p>G02 Students will be expected to describe and compare the sides and angles of regular and irregular polygons.</p>	<p>G01 Students will be expected to perform geometric constructions, including</p> <ul style="list-style-type: none"> perpendicular line segments parallel line segments perpendicular bisectors angle bisectors <p>M02 Students will be expected to develop and apply a formula for determining the area of triangles, parallelograms, and circles.</p>		<p>G02 Students will be expected to demonstrate an understanding of similarity of polygons.</p> <p>G03 Students will be expected to draw and interpret scale diagrams of 2-D shapes.</p> <p>G04 Students will be expected to demonstrate an understanding of line and rotation symmetry.</p>
ANGLES	<p>M01 Students will be expected to demonstrate an understanding of angles by</p> <ul style="list-style-type: none"> identifying examples of angles in the environment classifying angles according to their measure estimating the measure of angles using 45°, 90°, and 180° as reference angles determining angle measures in degrees drawing and labelling angles when the measure is specified 			<p>M01 Students will be expected to solve problems and justify the solution strategy, using the following circle properties:</p> <ul style="list-style-type: none"> The perpendicular from the centre of a circle to a chord bisects the chord. The measure of the central angle is equal to twice the measure of the inscribed angle subtended by the same arc. The inscribed angles subtended by the same arc are congruent. A tangent to a circle is

	M02 Students will be expected to demonstrate that the sum of interior angles is 180° in a triangle and 360° in a quadrilateral.			perpendicular to the radius at the point of tangency.
SORTING 3-D OBJECTS AND 2-D SHAPES				
TRANSFORMATIONAL GEOMETRY	<p>G03 Students will be expected to perform a combination of translation(s), rotation(s), and/or reflection(s) on a single 2-D shape, with and without technology, and draw and describe the image.</p> <p>G04 Students will be expected to perform a combination of successive transformations of 2-D shapes to create a design and identify and describe the transformations.</p> <p>G05 Students will be expected to identify and plot points in the first quadrant of a Cartesian plane using whole number ordered pairs.</p> <p>G06 Students will be expected to perform and describe single transformations of a 2-D shape in the first quadrant of a Cartesian plane (limited to whole number vertices).</p>	<p>G02 Students will be expected to identify and plot points in the four quadrants of a Cartesian plane, using integral ordered pairs.</p> <p>G03 Students will be expected to perform and describe transformations (translations, rotations, or reflections) of a 2-D shape in all four quadrants of a Cartesian plane (limited to integral number vertices).</p>	G02 Students will be expected to demonstrate an understanding of the congruence of polygons under a transformation.	

STATISTICS AND PROBABILITY PROGRESSION

DATA MANAGEMENT	<p>G05 Students will be expected to identify and plot points in the first quadrant of a Cartesian plane using whole number ordered pairs.</p> <p>SP01 Students will be expected to create, label, and interpret line graphs to draw conclusions.</p> <p>SP02 Students will be expected to select, justify, and use appropriate methods of collecting data, including questionnaires,</p>	<p>G02 Students will be expected to identify and plot points in the four quadrants of a Cartesian plane, using integral ordered pairs.</p> <p>SP03 Students will be expected to construct, label, and interpret circle graphs to solve problems.</p>	SP01 Students will be expected to critique ways in which data is presented.	<p>SP01 Students will be expected to describe the effect on the collection of data of bias, use of language, ethics, cost, time and timing, privacy, and cultural sensitivity.</p> <p>SP02 Students will be expected to select and defend the choice of using either a population or a sample of a population to answer a question.</p>

	<p>experiments, databases, and electronic media.</p> <p>SP03 Students will be expected to graph collected data and analyze the graph to solve problems.</p>			<p>SP03 Students will be expected to develop and implement a project plan for the collection, display, and analysis of data by</p> <ul style="list-style-type: none"> ▪ formulating a question for investigation ▪ choosing a data collection method that includes social considerations ▪ selecting a population or a sample ▪ collecting the data ▪ displaying the collected data in an appropriate manner ▪ drawing conclusions to answer the question
STATISTICS		<p>SP01 Students will be expected to demonstrate an understanding of central tendency and range by</p> <ul style="list-style-type: none"> • determining the measures of central tendency (mean, median, mode) and range • determining the most appropriate measures of central tendency to report findings <p>SP02 Students will be expected to determine the effect on the mean, median, and mode when an outlier is included in a data set.</p>		
PROBABILITY	<p>SP04 Students will be expected to demonstrate an understanding of probability by</p> <ul style="list-style-type: none"> ▪ identifying all possible outcomes of a probability experiment ▪ differentiating between experimental and theoretical probability ▪ determining the theoretical probability of outcomes in a probability experiment ▪ determining the experimental probability of outcomes in a probability experiment ▪ comparing experimental results with the theoretical probability for an experiment 	<p>SP04 Students will be expected to express probabilities as ratios, fractions, and percents.</p> <p>SP05 Students will be expected to identify the sample space (where the combined sample space has 36 or fewer elements) for a probability experiment involving two independent events.</p> <p>SP06 Students will be expected to conduct a probability experiment to compare the theoretical probability (determined using a tree diagram, table, or other graphic organizer) and experimental probability of two independent events.</p>	<p>SP02 Students will be expected to solve problems involving the probability of independent events.</p>	<p>SP04 Students will be expected to demonstrate an understanding of the role of probability in society.</p>
